

What is claimed is:

- 09906559-112301
1. A method in a network entity comprising the steps of:  
receiving media content from a sending entity and addressed to at  
5 least one recipient;  
accessing a database comprising recipient data describing multimedia  
reception capabilities and / or reception preferences for at least one recipient;  
forming, in accordance with said recipient data, a notification message  
containing information that said media content is available to be streamed to  
10 said at least one addressed recipient; and  
outputting the notification message for transmission to said at least one  
addressed recipient.
  2. A method according to claim 1 further comprising the steps of:  
15 receiving the media content in a multimedia messaging server; and  
providing the at least one addressed recipient with the media content  
via the network entity;  
wherein the network entity is a multimedia messaging relay.
  - 20 3. A method according to claim 1, wherein a streaming session is established  
in order to stream at least some of the media content to said at least one  
recipient.
  - 25 4. A method according claim 3, wherein said establishing of a streamed  
session is preceded by transmitting the notification message to said at  
least one addressed recipient.
  - 30 5. A method according to claim 1, wherein the media content comprises a  
set of different types of components and each component can be  
formatted in one or more formats.

- 09900359 112301
6. A method according to claim 5, wherein the method further comprises the following steps before said outputting of the media content:
- checking the format of at least one component of the received media content;
- 5 determining by using the recipient data whether the format is appropriate for said at least one addressed recipient; and
- if necessary, translating the component into a format appropriate for said at least one addressed recipient.
- 10 7. A method according to claim 1, wherein said notification message provides a minimum amount of information necessary for said at least one addressed recipient to establish a streaming session with the said network entity.
- 15 8. A method according to claim 1, wherein the method further comprises providing a radio link during communication with the addressed recipient.
9. A method according to claim 1, wherein said sending entity is chosen from a group consisting of: a media storing entity of a first telecommunication network, a media storing entity of a second telecommunication network, a media storage in an external data transmission network, and a terminal of the first telecommunication network.
- 20 10. A method according to claim 9, wherein the method further comprises transmitting the notification message to said at least one addressed recipient via a first telecommunication network and forming said notification message taking into account the properties of the first telecommunication network.
- 25 11. A network entity comprising:
- 30

means for receiving a media content from a sending entity and addressed to at least one recipient;

means for accessing a database comprising recipient data describing multimedia reception capabilities and / or reception preferences for the at least one addressed recipient;

notification means for forming, in accordance with said recipient data, a notification message containing information that said media content is available to be streamed to said at least one addressed recipient; and

outputting means for outputting the notification message for transmission to said at least one addressed recipient.

12. A communication system, comprising:

at least one recipient;

a network entity;

means for receiving media content from a sending entity and addressed to said at least one recipient;

means for accessing a database comprising recipient data describing multimedia reception capabilities and / or reception preferences for the at least one addressed recipient;

notification means for forming, in accordance with said recipient data, a notification message containing information that said media content is available to be streamed to said at least one addressed recipient; and

outputting means for outputting the notification message for transmission to said at least one addressed recipient.

13. A computer program for controlling a network entity, comprising:

computer code for causing the network entity to receive media content from a sending entity and addressed to at least one recipient;

computer code for causing the network entity to access a database comprising recipient data describing multimedia reception capabilities and / or reception preferences for the at least one addressed recipient;

00000359.112301

computer code for causing the network entity to form, in accordance with said recipient data, a notification message containing information that said media content is available to be streamed to said at least one addressed recipient; and

- 5 computer code for causing the network entity to output the notification message for transmission to said at least one addressed recipient.
